

Owner Manual

Welcome to **NexusPOS AI - Pilot Launch Edition**. This manual provides comprehensive instructions for owners to configure and manage their restaurant operations.

1. Initial Setup

When you log in for the first time, you must configure your core store settings.

1.1 Business Settings

1. Navigate to **Settings > Business Settings** in the left sidebar.
2. Enter your **Store Name**, **Legal Entity Name**, and **Tax ID (GSTIN)**.
3. Upload your **Business Logo**.
4. Set your local **Timezone** and **Currency Symbol**.
5. Click **Save Settings**.

1.2 Tax Settings

1. Navigate to **Settings > Taxes**.
2. Set your **Global Default Tax Rate** (e.g., 5%).
3. Toggle whether tax should automatically apply to **Dine-In**, **Takeaway**, or **Delivery** orders.
4. Toggle **Print GSTIN on Receipts** to ensure legal compliance.

1.3 Receipt Settings

1. Navigate to **Settings > Receipts**.
2. Select your printer format: **Thermal 80mm** (standard POS) or **A4 Invoice**.
3. Customize your **Header** and **Footer** text (e.g., "Thank you for visiting!").
4. Choose between **Tax Inclusive** (hidden in line items) or **Tax Exclusive** (added at the end).
5. Preview your receipt on the right side of the screen before saving.

2. Menu & Inventory Management

NexusPOS AI uses a powerful recipe-based inventory system to automatically deduct stock as you sell items.

2.1 Adding Raw Ingredients

1. Go to **Inventory > Items**.
2. Click **Add New Item**.
3. Check the box **Is Raw Ingredient**.
4. Enter the Name (e.g., "Coffee Beans"), SKU, Unit of Measure (e.g., "kg"), and Unit Cost.
5. Set a **Reorder Level** to receive alerts when stock runs low.

2.2 Adding Menu Items (Sellable Goods)

1. Go to **Menu > Items**.
2. Click **Create Menu Item**.
3. Enter the Name (e.g., "Cappuccino"), Price, and assign it to a Category (e.g., "Beverages").
4. Upload an image for the POS interface.

2.3 Linking Recipes

To deduct coffee beans automatically when a cappuccino is sold:

1. Edit the "Cappuccino" menu item and click **Manage Recipe**.
2. Add "Coffee Beans" as an ingredient.
3. Set the quantity (e.g., 0.015 kg for 15 grams).
4. Save the recipe.

3. Analytics & Reporting

NexusPOS AI provides real-time insights into your business performance.

3.1 Analytics Dashboard

Navigate to **Analytics**. You will see:

- **Today's Sales:** Real-time revenue for the current day.
- **Hourly Sales Trends:** A line chart showing your busiest hours.
- **Payment Breakdown:** A pie chart showing Cash vs. UPI vs. Card usage.
- **Top Selling Items:** A bar chart of your most popular dishes.

3.2 Generating Reports

1. Go to **Reports**.
2. Select a report type (e.g., **Daily Sales Report, Inventory Movement**).
3. Select a date range and click **Generate**.
4. Export the data as CSV or PDF for your accountant.

4. Staff Management

(Note: Advanced role management is coming in Phase 2. Currently, roles are assigned during tenant creation.)

4.1 Best Practices for Staff Security

- **Do not share credentials.** Ensure Cashiers and Kitchen Staff use their dedicated logins.
 - **Cashier accounts cannot access Analytics or Settings.** If a cashier needs a refund override, a Manager must authorize it.
-

5. Troubleshooting & Best Practices

Common Mistakes

- **Negative Inventory:** If you sell a menu item but forgot to add the raw ingredient stock via a Goods Received Note (GRN), your inventory will drop below zero. **Fix:** Do a Manual Stock Adjustment to correct the balance.
- **Tax Not Printing:** If taxes are missing on receipts, ensure **Tax Exclusive** is selected in Receipt Settings.

Backup Recommendations

Your database is hosted securely on Supabase.

- **Automated Backups:** Your data is backed up daily automatically.
- **Disaster Recovery:** If you accidentally delete menu items, contact your system administrator to perform a Point-in-Time Recovery (PITR).
